## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 9-12 are cancelled.
2. Claims 1-8, 13-28 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art fails to teach or fairly suggest a quantizer comprising a fluctuating reference level generator for generating the randomly fluctuating reference levels to the comparator module (claim 1); a pseudo-random sequence bit generator for producing random control signals to the voltage reference selection circuitry wherein the voltage reference selection circuitry selects the second number of voltage levels based on the random control signals (claim 7); selecting and adding a dither signal based on a pseudo-random generator bit stream value to one of the integrated analog signal and the feedback signal (claim 13); a quantizer for producing a digital output having a digital value coarsely reflecting an amplitude of the analog signals based upon randomly fluctuating reference levels, wherein the reference levels fluctuate based on a received pseudo-random sequence bit stream (claim 20); means for comparing the subset of fluctuating reference levels to an analog input signal (claim 23); and means for adding the shaped noise current source to an output of the means for converting the digital signal to analog (claim 26). Therefore, claims 1-8, 13-28 are allowed.
